outmate + HubSpot: the whole flow

Read from your CRM. Add back what is missing. You approve every write.

outmate · HubSpot
11 Nov 2026

Person Server

1 · SET UP ONCE

- Sign up, get a token
- One line connects every agent
- Connect HubSpot
  Connections page · Nango
- Linked to your token

2 · READ

- Ask in any agent
  e.g. Is Vercel in HubSpot?
- Router picks tools
- Reads your HubSpot
  companies · contacts
- Looks outside too
  web · Apollo · Hunter
- Answer: what is there, what is missing

3 · WRITE BACK

- "Add the missing ones"
- Proposal, nothing sent
  old value → new value
- You approve
- HubSpot updated
  plus a note on the record
- "1 created, 1 updated"

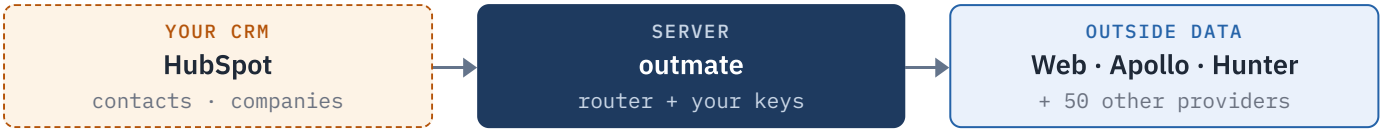

ONE SERVER

outmate

your own HubSpot login · nothing is written without a yes · HubSpot stays the source of truth

The two-way loop

What moves in, what moves out

HubSpot data comes in to be compared. Outside data goes out to HubSpot only after approval.

COLLECT FROM HUBSPOT

Jo asks
e.g. Is Vercel in HubSpot?

↓

Server finds Jo's HubSpot login

↓

Searches HubSpot
read-only

↓

Compares with outside results

↓

Short answer
e.g. 2 in HubSpot, 1 missing

- contact name
- email
- job title
- company
- domain
- size

SEND TO HUBSPOT

Jo says
e.g. Add the missing one

↓

Server builds a proposal

↓

Jo approves
exactly what was shown

↓

Writes to HubSpot
no duplicates

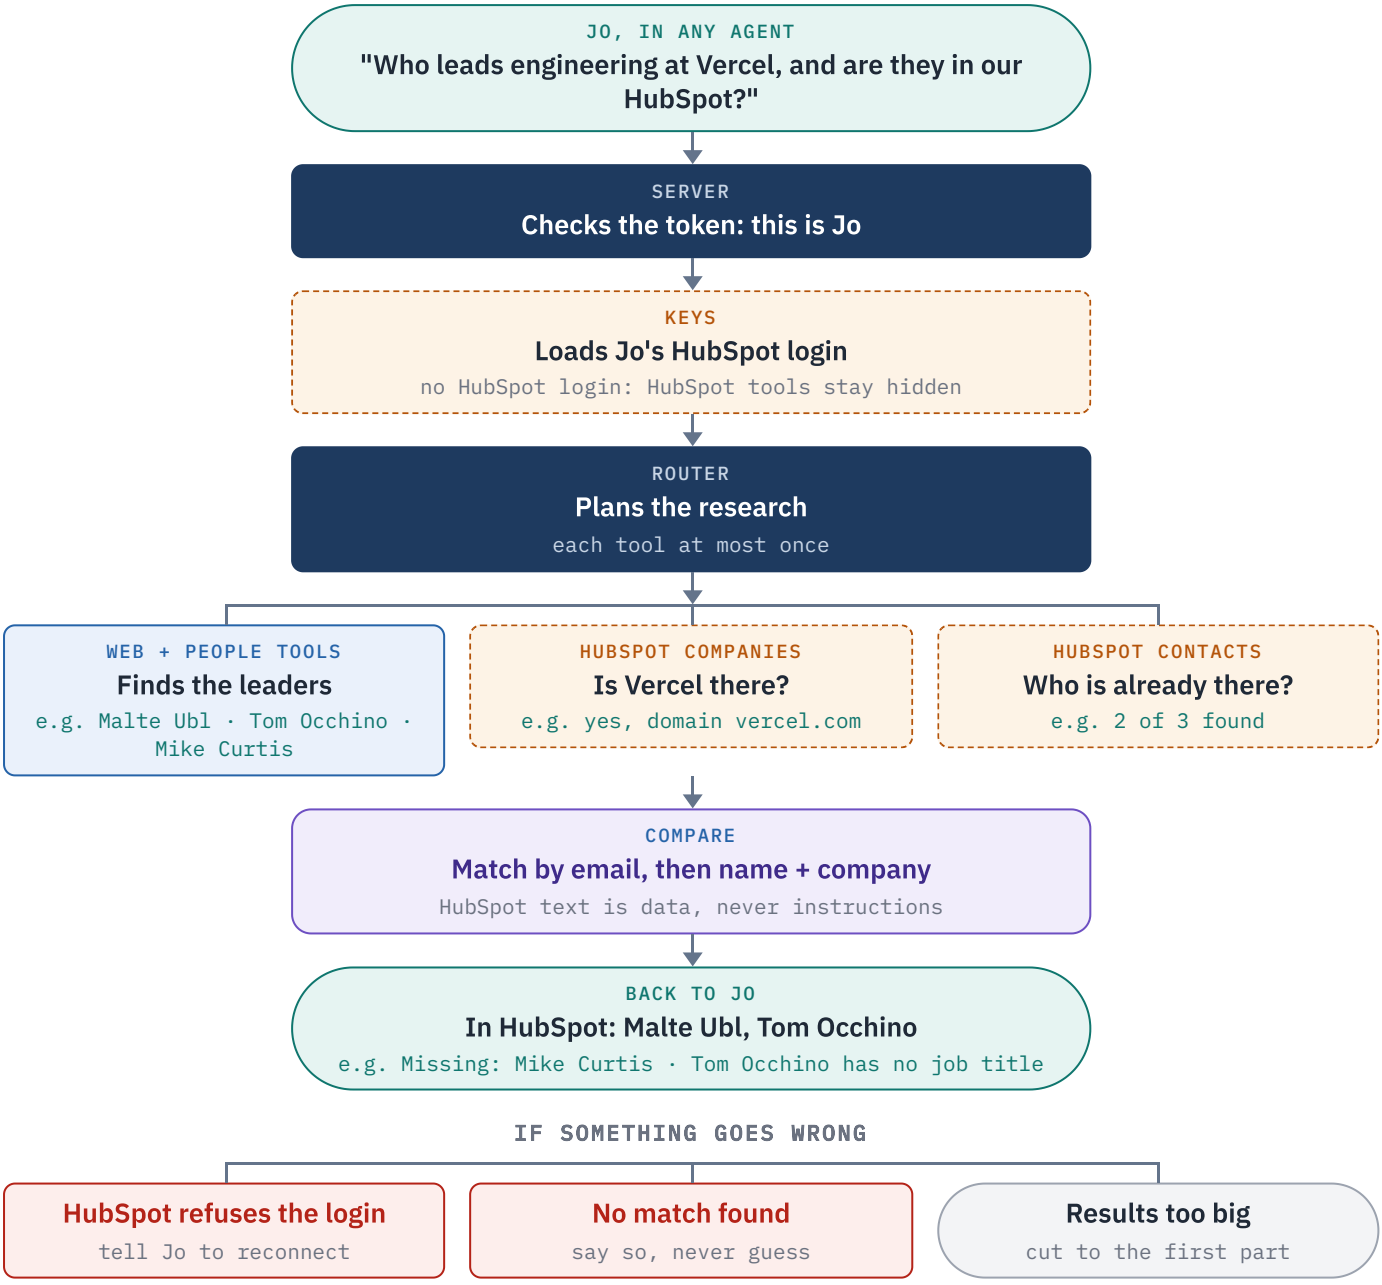

↓

Result + audit note
e.g. 1 created, 1 updated

- new contact
- blank fields
- note
- company link

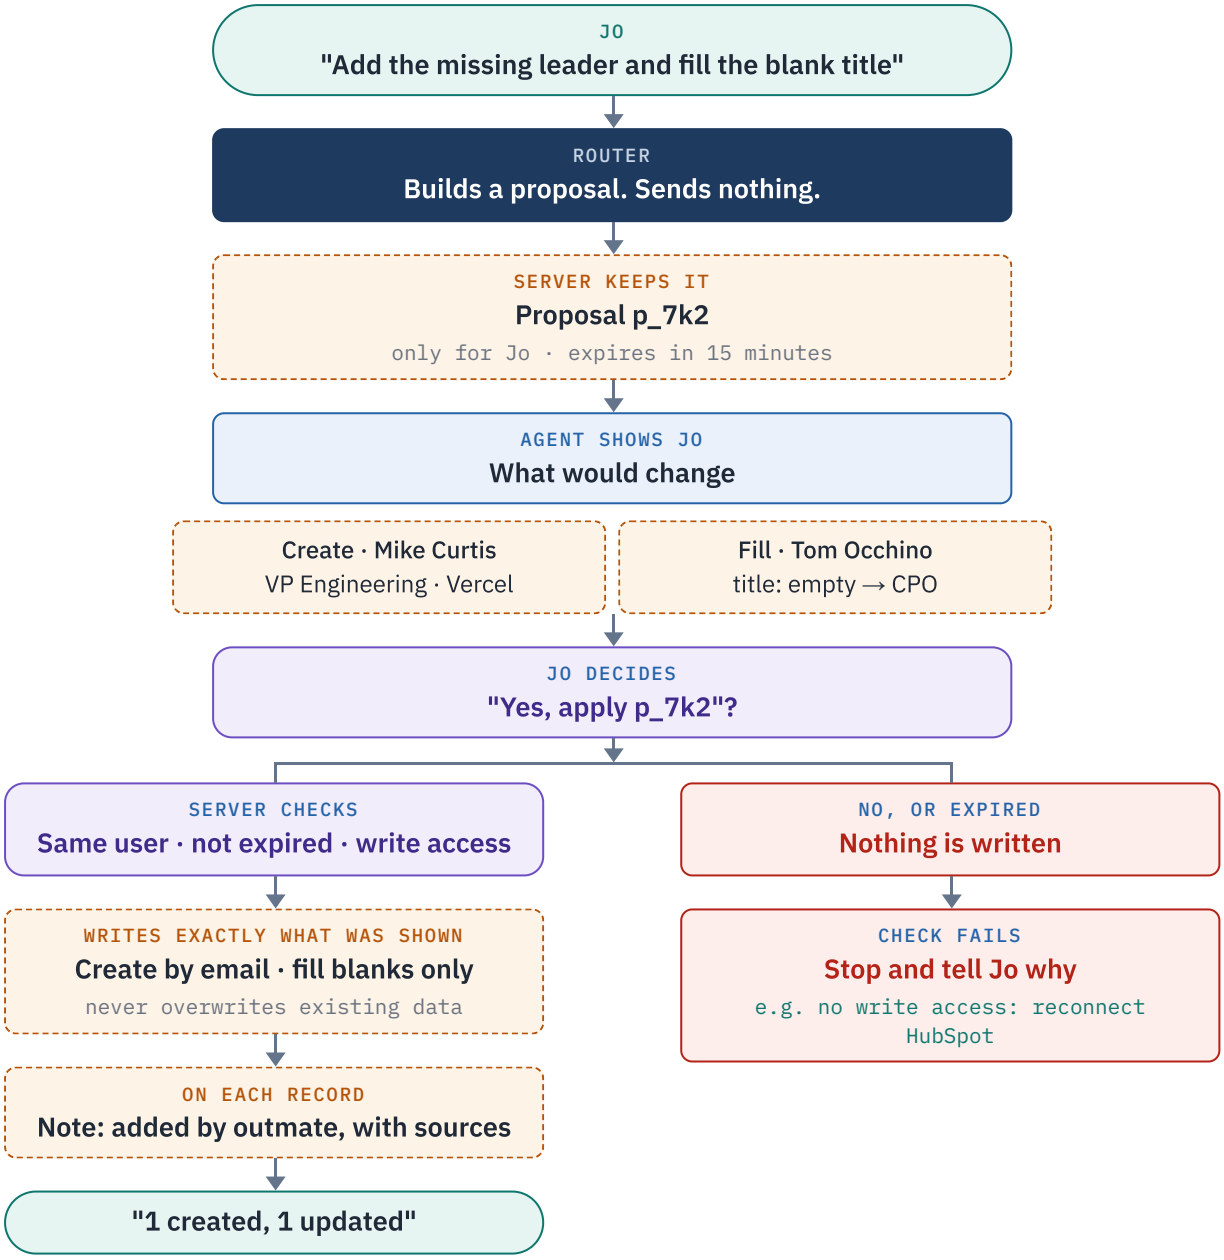

Collect from HubSpot, in detail

Example: Jo asks about Vercel's engineering leaders

Send to HubSpot, in detail

Example: Jo adds what is missing

Guard rails and what is left

Why it is safe, and what is next

GUARD RAILS (BY DESIGN)

Jo's own HubSpot login	Read-only by default	Write needs write access
Propose, then approve	Fill blanks, never overwrite	Match by email, no duplicates
Approved text = sent text	Every write leaves a note	HubSpot text is only data

STILL TO DO

Real HubSpot test
a developer test account, then a pilot user

Confirm the access scopes
what the login needs for read, write and notes

Proposals survive a restart
today they live in memory

Audit log
who approved what, and when

Link contact to company
today only the company name is set

Duplicate email response
confirm what HubSpot returns, live
