# onemate vs outmate

Same promise: no invented facts. A different place to live.

outmate · review
11 Nov 2026

Person  Server

IN ONE LINE

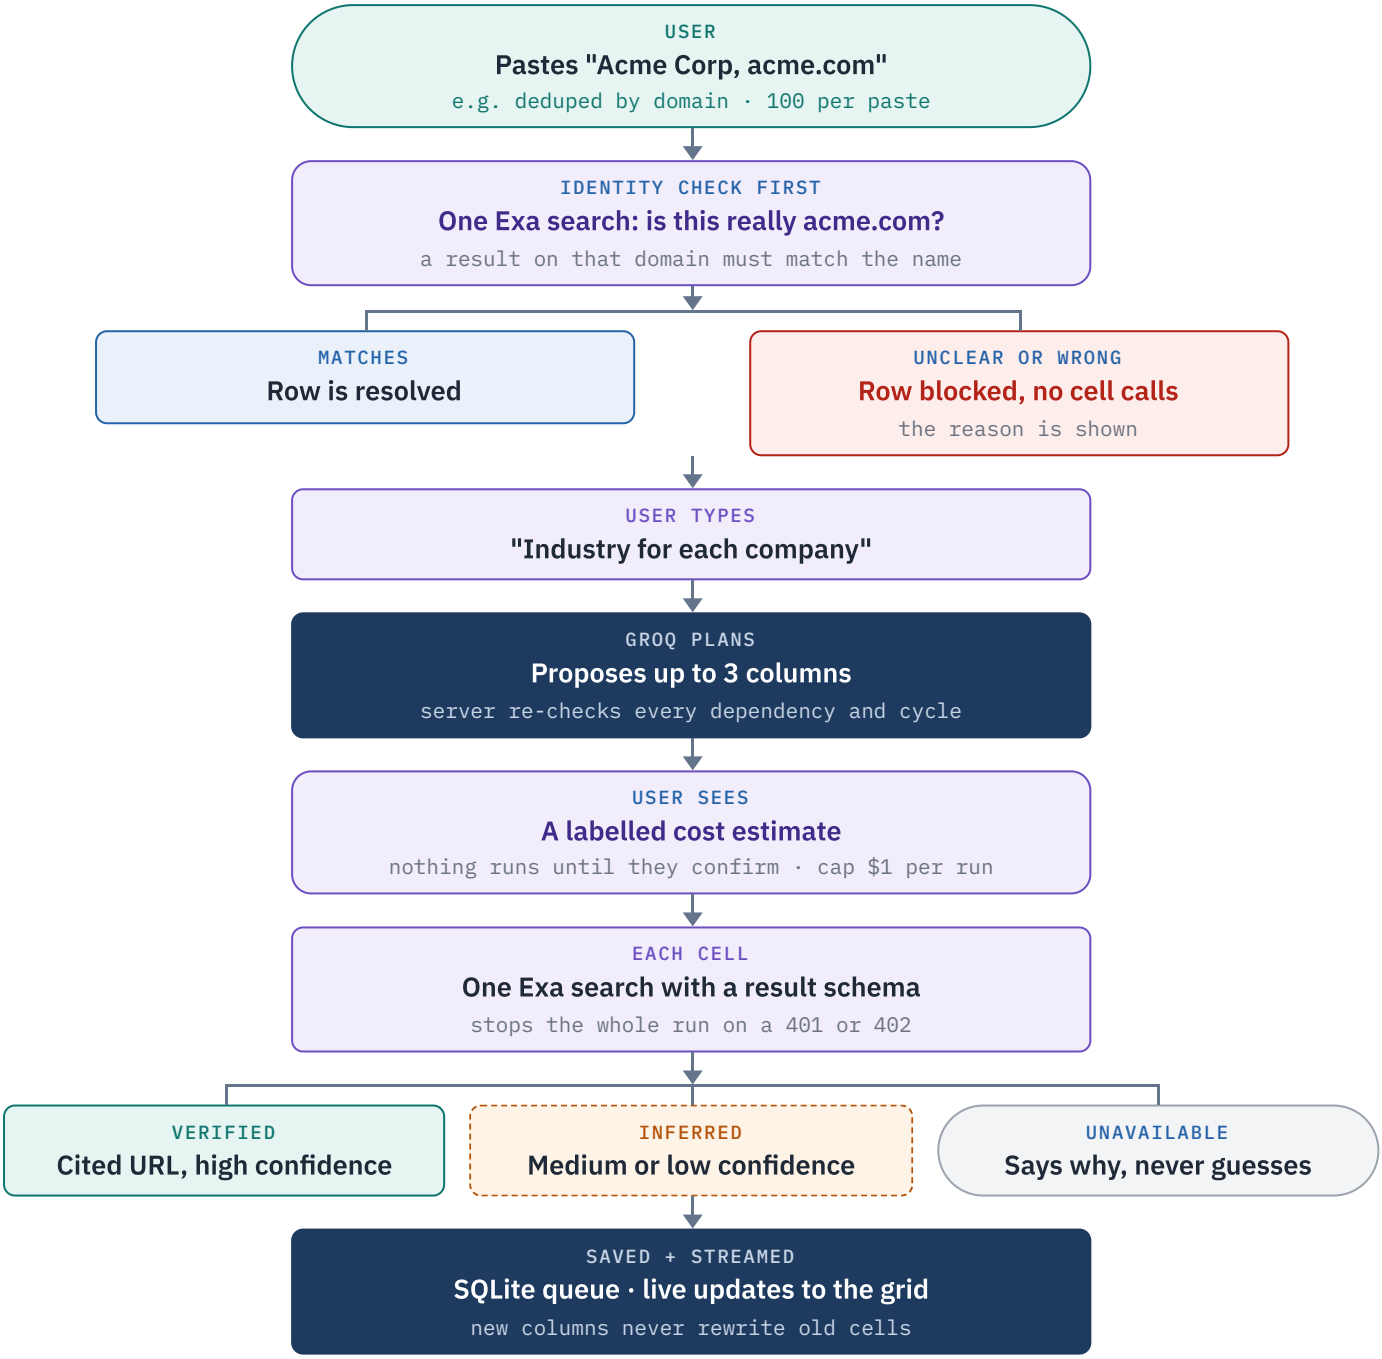

**onemate is a destination. outmate is a capability.**

One makes people come to a sheet. The other goes to where they already work.

# How onemate works

Example: a sheet with Acme Corp and the column "Industry"

# Where we differ

Six choices, side by side

| ONEMATE | | OUTMATE |
|---|---|---|
| **A web app**<br>Next.js grid | WHERE IT LIVES | **Inside the agent**<br>MCP, one line to set up |
| **One trusted user**<br>no login | WHO USES IT | **Many users**<br>a token each |
| **One server key**<br>Exa · Groq · MoltSets | PROVIDER KEYS | **Each user's own key**<br>Nango · 50+ providers |
| **Lists**<br>a grid, many rows at once | SHAPE OF WORK | **Questions**<br>one bounded conversation |
| **Trust label on each value**<br>verified · inferred · unavailable | TRUST | **Sources named**<br>no trust label yet |
| **CSV export** | AFTER THE ANSWER | **Write to HubSpot**<br>propose, you approve |

## ADDING A DATA SOURCE

| | | |
|---|---|---|
| **A code change**<br>new adapter in Python | NEW PROVIDER | **One JSON file**<br>no restart, no code |
| **Exa first**<br>web search is the engine | DATA | **Many providers**<br>router chooses per question |

# What we borrow, and why ours fits

Take the best ideas. Keep our shape.

## WORTH BORROWING

**A trust label on every value**
verified, inferred or unavailable, so users see how sure we are

**Cost preview and a spend cap**
users pay their own provider keys, so they will want this

**Resolve the company first**
a cheap check before any paid lookup stops wrong-company answers

**History of every write**
matches our audit-log to-do for HubSpot

**A list mode**
later: HubSpot lists are the natural source of rows

## WHY OUR SHAPE FITS OUR PRODUCT

REACH
**Users stay in the agent they use**

COST
**Their keys, their bill**

GROWTH
**A new source is one file**

CRM
**HubSpot stays the source of truth**

Name check: onemate's README is also titled "Outmate". Decide which name leads before it is shared outside the team.
